

ECE588/688 Project Final Deliverables

Project Demo/Presentation

Each group will be assigned a 15minute slot for their project demo/presentation session. This session is intended for you to provide a “sales pitch” for your project. You can accomplish this goal by any one (or a combination) of the following methods: (i) A formal PowerPoint presentation, (ii) An informal verbal description, (iii) A set of diagrams and graphs, (iv) A demo of your project. Please budget for 5 minutes of questions from the TA and instructor.

The project demos will be in Week 10 from Mar 7th – Mar 10th. TA will send announcement regarding project demo scheduling.

Final Report and Roles & Responsibility Document

The final report is due on Friday, March 11th before midnight (no extensions). The report should be styled after the conference papers that have been covered in the class. It should consist of an abstract, body and optional appendices. The abstract should summarize the contributions of the report in less than 300 words. The length of the body should be the equivalent of 10-15 pages at double-spaced 10-pt font. Additional supporting material can be put in appendices. You should ensure that any feedback provided during the project demo (such as, requests for additional experiments and/or data) is incorporated in the final report.

In addition to the project report, each team needs to also submit a Project Roles & Responsibility document by Friday, March 11th before midnight (no extensions). In this document, students need to list each project team member’s contribution to the project and who did what part for the project.

You should submit the pdf version of your final report via Canvas. In addition, also attach a gzipped tar file containing your simulator code for programming project.
